Description of the Planned Network Change(s):

Consolidated Communications of Northern New England Company, LLC (“Consolidated”), intends to retire the copper facilities at all locations in the three (3) wire centers listed above. The copper facilities being retired support services that depend on obsolete time-division multiplexing technology and also use SS7 signaling. To the extent there are telecommunications services provided over these copper facilities, Consolidated has or will comply with the FCC’s discontinuance rules before retiring the copper facilities. Locations affected by this copper retirement will have access to services including fixed or mobile wireless service from multiple providers, or wireline options, including VoIP service provided by Consolidated’s affiliate Fidium or by third party competitive providers.

Description of Reasonably Foreseeable Impact(s) of the Planned Change(s):

After the retirement of the copper facilities, interconnecting carriers will need to make alternative arrangements for services formerly obtained via these copper facilities. Consolidated offers multiple modern products and services available to replace services formerly provided over these copper facilities. To help ensure an orderly transition, Consolidated may require customers and interconnecting entities to migrate services off of copper facilities well before the copper retirement implementation date. To the extent applicable, Consolidated will notify customers regarding such migration and make any required applications to the FCC, consistent with the FCC’s discontinuance rules.
